Syllabus of

M.Sc. (Computer Application) (Campus)

(2 years) (Revised CBCS pattern)

Introduced from Academic Year 2019-2020

Program code: SCS-S-MSCA-PG (13-2-1-01)

M.Sc. Computer Application (Campus)

<u>M.Sc. Computer Application (</u>2years) program / degree is a specialized program in latest advances in computer application issues. It builds the student on higher studies and research awareness in overall computational application fields so as to become competent in the current race and development of new computational sciences. The duration of the study is of four semesters, which is normally completed in two years.

CBCS pattern

<u>The M.Sc. Computer Application program</u> as per CBCS (Choice based credit system) pattern, in which choices are given to the students under open electives and subject electives. The students can choose open electives from the wide range of options to them.

Eligibility and Fees

The eligibility of a candidate to take admission to **M.Sc. Computer Application program** is as per the eligibility criteria fixed by the University. More details on admission procedure and fee structure can be seen from the prospectus of the college / institution as well as on website of the University.

Credit Pattern

Every course has corresponding grades marked in the syllabus structure. There are 25 credits per semester. A total of 100 credits are essential to complete this program successfully. The Grading pattern to evaluate the performance of a student is as per the University rules.

Every semester has a combination of Theory (core or elective) courses and Lab courses. Each theory course has 04 credits which are split as 02 external credits and 02 internal credits. The university shall conduct the end semester examination for 02 external credits. For theory internal credit, student has to appear for 02 class test (15 marks) and 01 assignment (20 marks). Every lab course has 02 credits which are split as 01 external credit and 01 internal credit. For lab internal credit, the student has to submit Laboratory Book (05 marks) and remaining 20 marks are for the Lab activities carried out by the student throughout the semester. For lab external credit, 20 marks are reserved for the examinational experiment and 05 marks are for the oral / viva examinations. There is a special skill based activity of 01 internal credits per semester which shall inculcate awareness regarding the domain of computers, IT, and ICT.

The open elective has 04 credits which are purely internal. If students are opting for MOOCs as open elective, then, there must be a Faculty designed as MOOCs course coordinator who shall supervise learning through MOOCS. This is intentionally needed as the MOOCs course coordinator shall verify the MOOC details including its duration, staring date, ending date, syllabus contents, mode of conduction, infrastructure feasibility, and financial feasibility during start of each semester. This is precautionary as the offering of the MOOCs through online platforms are time specific and there must be proper synchronization of semester duration with the MOOCs duration. Students must opt for either institutional / college level open elective or a course from University recognized MOOCs platforms as open electives.

The number of hours needed for completion of theory and practical courses as well as the passing rules, grading patterns, question paper pattern, number of students in practical batches, etc shall be as per the recommendations, norms, guidelines and policies of the UGC, State Government and the SRTM University currently operational. The course structure is supplemented with split up in units and minimum numbers of hours needed for completion of the course, wherever possible.

Under the CBCS pattern, students would graduate <u>M.Sc. Computer Application</u> with a minimum number of required credits which includes compulsory credits from core courses, open electives and program specific elective course. All students have to undergo lab / practical activities leading to specific credits and project development activity as a part of professional UG program.

- 1. M.Sc. Computer Application Degree / program would be of 100 Credits. Total credits per semester= 25
- 2. Each semester shall consist of three core courses, one elective course, one open elective course and two practical courses. Four theory courses (core+elective) = 16 Credits. Two practical / Lab courses= 4 Credits in total (02 credits each), One Open elective= 4 credit, One skill
- 3. enhancement activity of 01 credits.
- 4. One Credit = 25 marks, Two Credits = 50 Marks, Four Credits = 100 Marks

PEO, PO and CO Mappings

- 1. Program Name : M.Sc.(CA) Campus { SCS-S-MSCA-PG (13-2-1-01)}
- 2. Program Educational Objectives: After completion of this program, the graduates / students would

PEO I :Technical Expertise	Implement fundamental domain knowledge of core courses for developing effective computing solutions by incorporating creativity and logical reasoning.
PEO II : Successful Career	Deliver professional services with updated technologies in computational science based career.
PEO III :Hands on Technology and Professional experience	Develop leadership skills and incorporate ethics, team work with effective communication & time management in the profession.
PEO IV :Interdisciplinary and Life Long Learning	Undergo higher studies, certifications and research programs as per market needs.

3. **Program Outcome(s):** Students / graduates will be able to

PO1: Apply knowledge of mathematics, science and algorithm in solving Computer problems. **PO2:** Generate solutions by understanding underlying computer application environment

PO3: Design component, or processes to meet the needs within realistic constraints.

PO4: Identify, formulate, and solve problems using computational temperaments.

PO5: Comprehend professional and ethical responsibility in computing profession.

PO6: Express effective communication skills.

PO7: Recognize the need for interdisciplinary, and an ability to engage in life-long learning.

PO8: Actual hands on technology to understand it's working.

PO9: Knowledge of contemporary issues and emerging developments in computing profession.

PO10: Utilize the techniques, skills and modern tools, for actual development process **PO11:** Function effectively as an individual and as a member or leader in diverse teams and in

multidisciplinary settings in actual development work

PO12: Research insights and conduct research in computing environment.

4. **Course Outcome(s):** Every individual course under this program has course objectives and course outcomes (CO). The course objectives rationally match with program educational objectives. The mapping of PEO, PO and CO is as illustrated below

Program	Thrust Area	Program	Course Outcome
Educational		Outcome	
Objectives			
PEO I	Technical Expertise	PO1,PO2,PO3,PO6	All core courses
PEO II	Successful Career	PO4,PO5,PO11,	All discipline specific electives courses
PEO III	Hands on Technology and Professional experience	PO8,PO10	All Lab courses
PEO IV	Interdisciplinary and Life Long Learning	PO7,PO9,PO12	All open electives and discipline specific electives

5. Mapping of PEO& PO and CO

The detailed syllabus is as below,

CBCS Revised Syllabus w.e.f AY: 2019-2020 Program: M.Sc.(Computer Application) – Campus School {SCS-S-MSCA-PG (13-2-1-01)}

OR

Course	NCA-107 B	Course Name: Information Communication	Credits: 4
Code:		Technology (ICT)	

Course Objectives:

The ICT curriculum broadly attempts to equip students with an ability to negotiate a range of devices, tools, application, information and resources. The course is offered in chunks of three periods in a week, which include one teacher led session and two hands on sessions. The teacher led session aims to demonstrate techniques and processes and prevent a context to the learning. Following this, students engage themselves with activities which are designed to provide adequate hands on experience.

Course Outcome:

- Create digital art and textual materials
- Use e-resources for learning of curricular subjects
- Interact with ICT devices confidently
- Practise safe, legal and ethical means of using ICT
- Develop digital literacy skills that will enable them to function as discerning students in an increasingly digital society

Unit-1: Computer Fundaments

Information processing Cycle, Brief History of Computers, Environmental, social and ethical issues, laws of ICT, Organizations of Computer System, Introduction to Operating Systems, measures to protect data and systems.

Unit-2: Application Software

Advance Word Processing, working with styles, templates, forms, Advance Spreadsheets, working with multiple worksheets and workbooks, advance functions, Making presentations, working with multimedia presentations.

Unit-3: Database

Working with data, tables, and relationships, creating and customising queries, customising forms, creating reports.

Unit-4: Information and Communication systems

Information systems, networking concepts, functions of network devices, cabling standards, firewall, networking protocols, network security.

Unit-5: Internet Terminology

Web Fundamentals, Web Security, Communication protocols, creating web pages, working with images and multimedia, working with special effects.

Unit-6: Applications of ICT Career options in ICT, Job search on Internet and other media, Formatting Resume or CVs, Formatting Application Letters, working with publications. Text Books: Computer Fundamentals, MS-Office and Internet and Web Technology- Dinesh 1. Maidasani, Firewall Media. Computer Fundamentals- Anita Goel, Person Education. 2. Computer Fundamentals- P. K. Sinha, EduTech Learners. 3. **Reference Books** MS Office for Dummies- Wallace Wang, Wiley Publishing, Inc. 1. 2. Ms Office Step by Step- John Lambert, Microsoft Press. 3. Access Bible - Michael Alexander, Wiley Press. Fundamentals of Computer Networking - Sanjay Sharma, Katson Press. 4.

Code:	First semester	Skill based Activity	Credits: 01		
NCA-108		SK- 01: PC Assembly and Maintenance			
Scope : Practically understand the PC and surrounding peripherals. The student will assemble / setup and upgrade personal computer systems; install OS and other application software, diagnose and isolate faulty components; optimize system performance and install / connect peripherals.					

Course	NCA-201	Course Name: Operating System Concepts	Credits: 4
Code:			
Course Ob	viectives.		
	the fundamentals of C	Deperating Systems	
		S to handle processes and threads and their communi	cation
		ved in memory management in contemporary OS	
4. To gain	knowledge on distrib	outed operating system concepts that includes arch	itecture, Mutual
exclusion a	lgorithms, deadlock de	etection algorithms and agreement protocols

1.	Operating Systems Co	oncepts- Silberschatz A., Galvin P., Gagne G, Wiley	Publication.

Course Code: NCA-202 Course Name: Introduction to Databases Credits: 4 Course Objectives: 1. To understand the features of Relational database. 2. To describe data models and schemas in DBMS. 3. To use SQL- the standard language of relational databases for database operations. 4. To understand the functional dependencies and design of the databases. Course Outcome: 1: To study the basic concepts of relational databases 2: Learn and practice data modelling using the entity-relationship and developing database designs 3: Understand the use of Structured Query Language (SQL) and learn SQL syntax for writing queries. 4: Apply normalization techniques to normalize the databases.
1. To understand the features of Relational database. 2. To describe data models and schemas in DBMS. 3. To use SQL- the standard language of relational databases for database operations. 4. 1: To study the basic concepts of relational databases 2: Learn and practice data modelling using the entity-relationship and developing database designs 3: Understand the use of Structured Query Language (SQL) and learn SQL syntax for writing queries. 4: Apply normalization techniques to normalize the databases. Unit-1: Introduction
1: To study the basic concepts of relational databases 2: Learn and practice data modelling using the entity-relationship and developing database designs 3: Understand the use of Structured Query Language (SQL) and learn SQL syntax for writing queries. 4: Apply normalization techniques to normalize the databases. Unit-1: Introduction
Problems in Traditional file oriented approach, Three level architecture of DBMS, basic datab components like schema, views, instances, General Architecture of DBMS, Roles of DBA, D Dictionary, Advantages and Disadvantages of DBMS.
Unit-2: DATA Models Concepts of Abstraction and Data Model, Discussions on data modeling using Entity Relations model, Discussions on data modeling using Relational Model, E-R to Relational Conversion.
Unit-3: Relational Algebra
Basics of Relational Algebra, selection, projection, division, cross product Operators Set Operators Join and its types, writing Relational Algebra notations for user queries.
Unit-4: Basic Normalization
Introduction to attributes, Keys, relationships and their types, Anomalies in databases, understand Functional Dependencies(Determinant, partial, full, transitive, multi valued, etc), normalizat process, First Normal form, Second Normal Form, Third Normal Form etc.
Unit-5: Advance Normalization
Boyce-Codd Normal Form, Fourth Normal Form, Fifth Normal Form.
Unit-6: SQL
Introduction to data retrieval languages like QBE, QUEL, SQL Discussions on SQL, Table , V Definitions ,DDL Statements, DML Statements, DCL Statements , TCL statements , SQL Functi ,Introduction to PL/SQL , Cursors.
Text Books:
1. Database Management Systems- Raghu Ramakrishnan, Johannes, Gehrke, Tata McGr Hill.
2 Database System Concepts- Silber Schatz Korth, Tata McGraw Hill.
Reference Books

NCA-204 Course Course Name: System Analysis and Design Credits: 4 Α Code: Elective **Course Objectives:** System analysis helps in discovering means to design systems where sub-system may have apparently conflicting objectives. It helps in achieving inter compatibility and unity of purpose of sub-systems. It offers a means to create understanding of the complex structures **Course Outcome:** After successfully completing this course, students will understand concepts of Analysis and Designing Information Systems. Students will understand writing system proposals, system development scheduling, and cost-benefits analysis etc. also dealing with quality assurance. 1: To learn basic things of systems, System development Life cycle, and System Analyst. 2: To determine specific needs of system. 3: Discuss approaches and tasks of system. Planning for developing system 4: Evaluate tools and techniques. 5: Use appropriate methods and techniques to design software. 6: Implementation of Developed System, Evaluation and Testing of system. Unit-1: Introduction System Definition, Characteristics, Elements and Types of system, Need of System Analysis and design, Role and Qualities of System Analyst, System Development Life Cycle. Feasibility Study Unit-2: Project Initiation, Feasibility study, Ascertaining HW/SW needs, Criteria for HW/SW selection, Make v/s Buy Decision, Cost Benefit Analysis. Unit-3: **Decision Modules** Structured Analysis tools- DFD, Data Dictionary, Decision Tree, Decision Table, Structured English, Activity planning control, Activity Diagrams, Case modeling, UML, Class Diagram. Unit-4: Scheduling System Proposal, Project Scheduling, Information Gathering Tools- Interviews, Questionnaire, JAD, Prototyping. Unit-5: Design System Design, Input/output Design, From Design, Database Design, File organization. Unit-6: Implementation System Implementation Plan, Activity Network for Conversion, Combating Resistance to Change, System Testing, Test Plan AND test data, Types of System Test, Quality Assurance, Documentation. **Text Books:** System Analysis and Design- Kendall and Kendall, Pearson Education, Inc., Prentice 1. Hall. **Reference Books** System Analysis and Design- E. M. Awad, Galgotia Publications Pvt. Ltd 1.

2. Modern System Analysis and Design - Jeffrey A. Hoffer, Prentice-Hall, Inc.

20

21 NCA-204 **Course Name:** Data Communications Course В Credits: 4 Code: Elective **Course Objectives:** At the end of the course, students will be able to understand basic computer network technology. Understand and explain various components of computer networks. Identify the different types of network topologies and protocols. Enumerate the layers of the OSI model and TCP/IP. Explain the function(s) of each layer. Identify the different types of network devices and their functions within a network. Understand and build the skills of routing mechanisms. **Course Outcome:** 1: Describe the building blocks of Computer Networks 2: Explain the functionalities and protocols of various layers in ISO/OSI Network model. 3: Implement a suitable routing strategies for a given network 4: Use suitable transport/application layer protocol based on application requirements Introduction Unit-1: Introduction to Communications Model, Data Communications, Networks, The Internet, An Example Configuration, The Need for a Protocol Architecture, The TCP/IP Protocol Architecture, The OSI Model, Standardization Within a Protocol Architecture, Traditional Internet-Based Applications, Multimedia. Unit-2: Data Transmission Data transmission, Concepts and Terminology, Analog and Digital Data Transmission Transmission Impairments, Channel Capacity. Unit-3: Transmission Media Transmission media, Guided Transmission Media, Wireless Transmission, Wireless Propagation, Line-of-Sight Transmission. Digital Data Communication Techniques Unit-4: Digital Data communication techniques, Asynchronous and Synchronous Transmission, Types of Errors, Error Detection, Error Correction, Line Configurations. Data Link Control Protocols Unit-5: Data link Control protocols, Flow Control, Error Control, High-Level Data Link Control (HDLC). Unit-6: Multiplexing Frequency Division Multiplexing, Synchronous Time Division Multiplexing, Statistical Time Division Multiplexing, Asymmetric Digital Subscriber Line, xDS. **Text Books:** Data and Computer Communications- William Stallings, 8th Edition Pearson Publication.

Data Communications and Networking, Behrouz A. Forouzan, 2nd Edition,

Code:	Second semester	Skill based Activity	Credits: 01
NCA-208		SK-02: Networking Essentials	
Scope : Networking Essentials deals with knowing what is a network, how to install, configure, and troubleshoot a computer network. It includes knowledge of the fundamental building blocks that form a modern network, such as various cables, switches, routers, connectors, LAN-NIC cards and network operating systems. It then provides in-depth coverage of the most important concepts in contemporary networking like connecting computers/ peripherals, servers and clients, Wi-Fi connectivity, etc. Students are expected to have the skills to build a network / LAN from scratch and maintain, upgrade, and troubleshoot an existing network.
